AIR POLLUTION CONTROL OPERATION PERMIT RENEWAL

EI FACILITY NO: 265006830 OPERATION PERMIT NO.: 265006830-P10

TYPE: Renewal of Part 70 source operation permit number 265006830-P01

In compliance with the provisions of Chapter 285, Wis. Stats., and Chapters NR 400 to NR 499, Wis. Adm. Code,

Name of Source: USG Interiors, LLC

Street Address: 208 Adeline St,
Walworth, Walworth County, Wisconsin

Responsible Official, & Title: Michael D. Spreitzer, Plant Manager

is authorized to operate Manufacture of acoustical ceiling tile, described in the plans and specifications dated June 26, 2013; July 3, 2013; July 10, 2013; July 16, 2013; July 29, 2013; August 7, 2013; August 12, 2013; October 28, 2013; November 20, 2013; November 21, 2013; December 4, 2013; December 18, 2013; January 6, 2014; January 7, 2014; and January 14, 2014 and in conformity with the conditions herein.

This renewed operation permit expires on December 23, 2019 [Section NR 407.09(1)(b)1., Wis. Adm. Code].

A renewal application must be submitted at least 6 months, but not more than 18 months, prior to the expiration date [ss. 285.66(3)(a), Wis. Stats. and NR 407.04(2), Wis. Adm. Code].

No permittee may continue operation of a source after the operation permit expires, unless the permittee submits a timely and complete application for renewal of the permit. If a timely and complete application for renewal is submitted, the existing operation permit will not expire until the renewal application has been finally acted upon by DNR. [§§ 227.51(2), Wis. Stats. and NR 407.04(2), Wis. Adm. Code].

Conditions of the operation permit marked with an asterisk (*) have been created outside of the Wisconsin's federally approved State Implementation Plan (SIP) and are not federally enforceable.

This authorization requires compliance by the permit holder with the emission limitations, monitoring requirements and other terms and conditions set forth in Parts I and II hereof.

Dated at Milwaukee, Wisconsin /s/ December 23, 2014

STATE OF WISCONSIN
DEPARTMENT OF NATURAL RESOURCES
For the Secretary

By /s/ Daniel Schramm
Daniel H. Schramm
Air Management Supervisor – Southeast Region

PREAMBLE TO OPERATION PERMIT

An Asterisk (*) throughout this document denotes legal authority, limitations and conditions which are not federally enforceable [Section NR 407.09(3)(b), Wis. Adm. Code.].

Historical Summary of Permits/Orders Issued to the Facility.

The following construction permits, orders, etc., are adopted, under ss. 285.65(3), Wis. Stats., and NR 407.09(2)(d), Wis. Adm. Code, by permit 265006830-P10 which then becomes the primary enforceable document:

Permit/Order Number	Issuance Date	Sources Covered & Description[1]	Permit Status
86-SJK-016	07/29/1986	Installation of No. 2 Acoustical Ceiling Tile Line (Processes P35, P36, P37, and P38) and modification of Process P39.	Adopted by Permit 265006830-P01, revised by 07-MCS-323
86-SJK-106-OP	07/25/1990	Initial operation of No. 2 Acoustical Ceiling Tile Line and Process P39.	Adopted by Permit 265006830-P01, revised by 07-MSC-323
92-JSB-235	04/16/1992	Construction and initial operation of two filters (Stacks S21 and S24) on the mineral wool blow chamber.	Adopted by Permit 265006830-P01, revised by 07-MSC-323
92-JSB-235-OP	04/16/1992	Operation of two filters on the mineral wool blow chamber (Process P31).	Adopted by Permit 265006830-P01, revised by 07-MCS-323
94-JSB-255 Exemption	06/03/1994	Installation of a ball clay storage silo.	Included in Permit 265006830-P01
96-JSB-244 Exemption	06/04/1996	Raising the elevation of the Kaolin clay day bin and accompanying bin vent such that the bin vent will vent through the building roof.	Included in Permit 265006830-P01
98-EJD-254 Exemption	11/15/1998	Addition of six kiln zone burners (5.6 MMBtu/hr each) onto Line No.1 drying line kiln (Process P32).	Included in Permit 265006830-P01
00-RSG-274 Exemption	10/24/2000	Addition of a drum filter to the blow chamber (Process P31).	Included in Permit 265006830-P01
01-RSG-313 Exemption	10/18/2001	Installation of two 1.2 MMBtu/hr natural gas fired convection ovens (Processes P34A and P38A).	Included in Permit 265006830-P01
02-RSG-300 Exemption	01/23/2002	Installation of a natural gas fired boiler (B10).	Included in Permit 265006830-P01
03-RSG-188 Exemption	07/24/2003	Installation of a 250 cfm indoor receiver for capturing dust for reuse.	Included in Permit 265006830-P01
04-RSG-094 Exemption	04/20/2004	Removal of Number 2 dry filter (C02) from Process P31.	Included in Permit 265006830-P01
07-MCS-323	07/10/2008	This permit was issued concurrently with 265006830-P01 to revise several limitations in the previous construction permits.	Adopted by Permit 265006830-P01
265006830-P01	07/10/2008	Total Facility.	Renewed by 265006830-P10
01-MCS-061-EXM	04/02/2010	Remove No. 1 dry filter and redirect air flow to No. 5 dry filter of Process P31.	Adopted by Permit 265006830-P10

[1] - Total Facility refers to all existing units at the facility at the time of issuance of the permit listed.

Stack and Process Index

Stack S11, Process B10 – 14.3 MMBtu/hr Cleaver Brooks Natural Gas-Fired Boiler. Installed in 2002. This boiler provides hot water and steam for the moulding lines.

Stack S12, Process P30, Control Devices C11 and C12 - Mineral Wool Cupola. Installed in 1969. The maximum throughput is 11.5 ton/hr. This process produces molten mineral from layers of coke, slag and silica. Emissions are controlled by an 8.4MMBtu/hr natural gas thermal oxidizer (C11) in series with a pulse-jet baghouse (C12).

Stack S13, Process P32 – Line No. 1 Acoustical Tile Dryer. Installed in 1959 and modified for increased heat capacity in 1998. Emissions are uncontrolled. The maximum heat input is 110 MMBtu/hr. Natural gas is the only fuel.

Stack S16, Process P39, Control Device C16 – Line No. 1 Mould Cleaning Brushes & Vaculift. Last modified in1987. After drying, acoustical tiles are removed from the moulding trays by vacuum suction. The used trays are automatically brushed clean in this mould cleaning line prior to reuse. Particulate matter emissions from the vacuum lifts and from the tray cleaning operations are controlled by a pulse-jet baghouse (C16).

Stack S14, Processes P33 & P34, Control Device C14 – Line No. 1 Finishing (Dimensioning & Spray Paint). Installed in 1959. The cooled acoustical tiles are trimmed to the appropriate dimensions at the saw/edging station (P33). The surface may be planed and the edges routed. Tiles are then sent through a spray paint station (P34) where tiles are roller conveyed under a series of pump fed spray paint nozzles. Overspray is collected and reused. Particulate matter emissions from the saw/edging station and spray paint station are controlled by pulse-jet baghouses (C14).

Stack S18, Processes P37 & P38, Control Device C18 – Line No. 2 Finishing (Dimensioning & Spray Paint). Installed in 1987. The cooled acoustical tiles are trimmed to the appropriate dimensions at the saw/edging station (P37). The surface may be planed and the edges routed. Tiles are then sent through a spray paint station (P38) where tiles are roller conveyed under a series of pump fed spray paint nozzles. Overspray is collected and reused. Particulate matter emissions from the saw/edging station and spray paint station are controlled by pulse-jet baghouses (C18).

Stack S25, Process P34A – Line No. 1 Finishing Curing Oven. Installed in 2001. After being spray painted, the panels are cured in one of two natural gas fired convection ovens rated at 1.2 MMBTU/hr each. Emissions are uncontrolled.

Stack S26, Process P38A – Line No. 2 Finishing Curing Oven. Installed in 2001. After being spray painted, the panels are cured in one of two natural gas fired convection ovens rated at 1.2 MMBTU/hr each. Emissions are uncontrolled.

Stacks S21, S22, and S24, Process P31, Control Devices C03, C04, and C05 - Mineral Wool Blow Chamber. Installed in 1959 and most recent modified in 2010. Molten mineral from the cupola is introduced into a stream of compressed air that passes through a spinning sprocket. This produces mineral wool fibers and waste shot. The fibers are collected on a traveling screen in the blow chamber. Exhaust from the blow chamber travels through one of three dry filters (2 vertical, 1 horizontal) before being emitted to the atmosphere. Fibers collected on these dry filters are returned to the blow chamber for further processing. Collected fibers in the blow chamber are either baled or transported to the acoustical tile manufacturing plant. The maximum throughput is 11.5 tons per hour.

Stack S30, Process P11 – Spark Ignition Natural Gas Fired Emergency Water Pump. Installed in November 2012. This unit is used to pump storm water during periods of electricity interruption. It is rated at 97.5 horsepower (hp) to provide 60 kW of electrical power. It was ordered in November 2011 and manufactured in December 2011. This unit is located and vents inside the building. Emissions are uncontrolled.

Insignificant Emissions Units.

The following units are considered insignificant and are listed in the application but are exempt from being further included under s. NR 407.05(4)(c)9.:

Maintenance of Grounds, Equipment, and Buildings (lawn care, painting, etc.)
Boiler, Turbine, and HVAC System Maintenance
Pollution Control Equipment Maintenance
Internal Combustion Engines Used for Warehousing and Material Transport
Fire Control Equipment
Janitorial Activities
Office Activities
Convenience Water Heating
Convenience Space Heating (<5 million Btu/hr burning natural gas)
Fuel Oil Storage Tanks
Demineralization and Oxygen Scavenging of Water for Boilers
Purging of Natural Gas Lines
Sanitary Sewer and Plumbing Venting
Process Emergency and Pressure Relief Vent Systems

The following units are considered insignificant and are listed in the application but are exempt from being further included under s. NR 407.05(4)(c)10.:

Bin Vents
Building Vents
Safety Kleen Parts Cleaners
550 Gallon Diesel Tank
550 Gallon Gasoline Tank
Raw Material Storage Pile
Waste Screening
Coating Manufacturing Operation

Permit Shield. Unless precluded by the Administrator of the US EPA, compliance with all emission limitations in this operation permit is considered to be compliance with all emission limitations established under ss. 285.01 to 285.87, Wis. Stats., and emission limitations under the federal clean air act, that are applicable to the source if the permit includes the applicable limitation or if the Department determines that the emission limitations do not apply. The following emission limitations were reviewed in the analysis and preliminary determination and were determined not to apply to this stationary source:

1. Requirements in NR 445.07(1), Wis. Adm. Code, do not apply to emissions from the combustion of group 1 virgin fossil fuels at Processes B10, P32, P34A, P38A, and P11.
2. Requirements in 40 CFR part 63, subpart JJJJJJ – National Emission Standards for Hazardous Air Pollutants for Industrial, Commercial, and Institutional Boilers Area Sources do not apply to Boiler B10 because it is a natural gas-fired boiler.

Part I - The headings for the areas in the permit are defined below. The legal authority for these limitations or methods follows them in [brackets].

Pollutant - This area will note which pollutant is being regulated by the permit.

Limitations - This area will list all applicable emission limitations that apply to the source, including case-by-case limitations such as Latest Available Control Techniques (LACT), Best Available Control Technology (BACT), or Lowest Achievable Emission Rate (LAER). It will also list any voluntary restrictions on hours of operation, raw material use, or production rate requested by the permittee to limit potential to emit.

Compliance Demonstration - The compliance demonstration methods outlined in this area may be used to demonstrate compliance with the associated emission limit or work practice standard listed under the corresponding **Limitations** column. The compliance demonstration area contains limits on parameters or other mechanisms that will be monitored periodically to ensure compliance with the limitations. The requirement to test as well as initial and periodic test schedules, if testing is required, will be stated here. Notwithstanding the compliance determination methods which the owner or operator of a sources is authorized to use under ch. NR 439, Wis. Adm. Code, the Department may use any relevant information or appropriate method to determine a source's compliance with applicable emission limitations.

Reference Test Methods, Recordkeeping, and Monitoring Requirements - Specific US EPA Reference test methods or other approved test methods will be contained in this area and are the methods that must be used whenever testing is required. A reference test method will be listed even if no testing is immediately required. Also included in this area are any recordkeeping requirements and their frequency and reporting requirements. Accuracy of monitoring equipment shall meet, at a minimum, the requirements of s. NR 439.055(3) and (4), Wis. Adm. Code, as specified in Part II of this permit.

Condition Type - This area will specify other conditions that are applicable to the entire facility that may not be tied to one specific pollutant.

Conditions - Specific conditions usually applicable to the entire facility or compliance requirements.

PART II - This section contains the general limitations that the permittee must abide by. These requirements are standard for most sources of air pollutants so they are included in this section with every permit.

PART III – This section contains the requirements of 40 CFR part 64 Compliance Assurance Monitoring (CAM) that the permittee must abide by.

Part I

A. Process B10, Stack S11 – One 14.3 MMBtu/hr Cleaver Brooks Boiler Fired With Natural Gas; Constructed in 2002; Equipped With Low NO_x Burner.

Pollutant	a. Limitations	b. Compliance Demonstration	c. Reference Test Methods, Record-keeping and Monitoring Require-ments
1. Particulate Matter (PM/PM_{10})	**(1)** No person may cause, allow or permit the emission of particulate matter to the ambient air from any fuel burning installation in excess of 0.15 lb/MMBtu. **[s. NR 415.06(2)(a)., Wis. Adm. Code]** **(2)** The boiler may emit up to, but not more than 0.20 lb/hr of particulate matter. **[s. 285.65(3) and (7), Wis. Stats.; s. NR 404.04, Wis. Adm. Code]**	**(1)** The permittee shall use only natural gas, as defined in s. NR 440.207(2)(q), Wis. Adm. Code, to fire the boilers.[1] **[s. NR 407.09(4)(a)3.b., Wis. Adm. Code]**	**(1)** Whenever any testing is required by the department for non-fugitive particulate emissions, including back-half, the owner or operator of the source shall use Method 5 in 40 CFR part 60, Appendix A, incorporated by reference in s. NR 484.04(13), Wis. Adm. Code, to determine non-fugitive particulate emissions, and Method 202 to determine condensible particulate emissions (back-half). **[ss. NR 407.09(1)(c)1.a. & (4)(a)1., NR 439.06(1) and NR 439.07(8)(b), Wis. Adm. Code]** **(2)** The permittee shall retain monthly records describing the fuels burned. **[ss. NR 407.09(1)(c)1.b. & (4)(a)1. NR 439.04(1)(d), and NR 440.207(9)(g), Wis. Adm. Code]**
2. Visible Emissions (VE)	**(1)** No owner or operator may cause or allow emissions of shade or density greater than number 1 of the Ringlemann chart or 20% opacity except as allowed under s. NR 431.05(1) and (2), Wis. Adm. Code. **[s. NR 431.05, Wis. Adm. Code]**	**(1)** The permittee shall use the requirement in I.A.1.b.(1), above, to demonstrate compliance with the limitation in I.A.2.a.(1). **[s. NR 407.09(4)(a)3.b., Wis. Adm. Code]**	**(1)** Whenever any testing is required by the department for visible emissions, the owner or operator of the source shall use Method 9 in 40 CFR part 60, Appendix A, incorporated by reference in s. NR 484.04(13), Wis. Adm. Code, to determine compliance with a visible emission limitation. **[ss. NR 407.09(1)(c)1.a. & (4)(a)1. and NR 439.06(9)(a)1., Wis.**

[1] Limiting the types of fuels used is an adequate method of demonstrating compliance with the particulate matter emission limit because the theoretical emissions while burning natural gas are less than the allowable limit (0.15 lb/MMBtu). The theoretical emissions are calculated using AP-42 emission factors. Assuming a standard heating value for natural gas (1,000 Btu/ft^3, AP-42), the emission factor, when converted to pounds per million Btu of heat input, is less than the allowable limit [7.6 lb/$mmft^3$ ÷ (1,000 Btu/ft^3) x million ft^3/1,000,000 ft^3 x 1,000,000 Btu/million Btu) = 0.0076 lb/MMBtu].

A. Process B10, Stack S11 – One 14.3 MMBtu/hr Cleaver Brooks Boiler Fired With Natural Gas; Constructed in 2002; Equipped With Low NO_x Burner.

Pollutant	a. Limitations	b. Compliance Demonstration	c. Reference Test Methods, Record-keeping and Monitoring Require-ments
			Adm. Code] **(2)** The permittee shall retain monthly records describing the fuels burned. **[ss. NR 407.09(1)(c)1.b. & (4)(a)1. and NR 439.04(1)(d), Wis. Adm. Code]**
3. Nitrogen Oxides (NO_x)	**(1)** The boiler may not emit more than 1,073 pounds of nitrogen oxide emissions per month, averaged over any 12 consecutive months. **[s. 285.65(3) and (7), Wis. Stats.; s. NR 404.04, Wis. Adm. Code]**	**(1)** The permittee shall use the requirement in I.A.1.b.(1), above, to demonstrate compliance with the limitation in I.A.3.a.(1). **[s. NR 407.09(4)(a)3.b., Wis. Adm. Code]** **(2)** Within 15 business days after each month, the permittee shall compute and record the following information for the boiler. (a) The amount of natural gas used in the previous month, in millions of cubic feet (b) The amount of NO_x emitted (in pounds) for the previous month using the following equation[2]: $E_{NOx} = 0.75 \times NG \times EF_{NG}$ Where E_{NOx} = total amount of NO_x emitted in pounds per month NG = amount of natural gas (in units of MMCF) used per month EF_{NG} = NO_x emission factor for natural gas combustion (c) the amount of NO_x emitted (in pounds per month) averaged over the last 12 consecutive months. **[s. NR 407.09(4)(a)(1), Wis. Adm. Code; s.**	**(1)** Whenever any testing is required by the department for nitrogen compound emissions, the owner or operator of the source shall use Method 7, 7A, 7B, 7C, 7D or 7E in 40 CFR part 60, Appendix A, incorporated by reference in s. NR 484.04(13), Wis. Adm. Code, to determine compliance with a nitrogen compound emission limitation. **[ss. NR 407.09(1)(c)1.a. & (4)(a)1. and NR 439.06(6)(a), Wis. Adm. Code]** **(2)** The permittee shall maintain monthly records of the information required in I.A.3.b.(2). **[ss. NR 407.09(1)(c)1.b. & (4)(a)1. and NR 439.04(1)(d), Wis. Adm. Code]**

[2] Note: This equation assumes the Ambient Ratio Method national annual default NO_2 to NOx ratio of 0.75.

NR 407.09(1)(c)1.b. & (4)(a)1. and NR 439.04(1)(d), Wis. Adm. Code]** **(3)** The permittee shall keep records of the pressure drop measurements required under I.B.1.b.(3) for at least 5 years. **[ss. NR 439.04(1)(d) and NR 439.04(2), Wis. Adm. Code]** **(4)** The permittee shall perform periodic internal inspections of the baghouse/ fabric filter dust collector to ensure that the control equipment is operating properly. The time

[3] The permittee elected this emission limit, which is more restrictive than emission limits in I.B.1.a.(1). The air quality impact analysis conducted on November 6, 2007, showed that this emission limit met the ambient air quality standards for particulate matter (PM and PM_{10}).
[4] This condition was established in construction permit 07-MSC-323 and supersedes the particulate matter emission limitation for the Mineral Wool Cupola (P30) in construction permit 86-SJK-016.

B. Process P30, Control Device(s) C11 and C12, Stack S12 – Mineral Wool Cupola. Maximum Heat Input: 33.21 MMBtu/hr. Controlled By an Afterburner (C11) In Series With a Baghouse (C12). Constructed or Modified in 1969.

Pollutant	a. Limitations	b. Compliance Demonstration	c. Reference Test Methods, Record-keeping and Monitoring Requirements
			interval between internal inspections shall be monthly[5]. These inspections shall include, but not be limited to inspections and maintenance/repair (as necessary) of: a) valves, hatches, dampers, and gaskets for signs of air infiltration; b) bag/filter condition, tension, and signs of clean side dust deposits. **[s. NR 407.09(4)(a)1., Wis. Adm. Code]** **(5)** The permittee shall keep records of all inspections, maintenance or repairs performed on the control devices and associated ductwork and capture hoods. The records shall include the date of any inspection, the findings of the inspection, and any action taken. **[s. NR 439.04(1)(d), Wis. Adm. Code]** **(6)** The pressure drop monitoring device shall be accurate to within 5 percent of the pressure drop being measured or within ± 1 inch of water column, whichever is greater. Each monitoring device shall be calibrated yearly or at a frequency based upon good engineering practice as established by operational history, whichever is more frequent. **[ss. NR 439.055(3)(a), and (4), Wis. Adm. Code]**
2. Visible Emissions (VE)	**(1)** No owner or operator may cause or allow emissions of shade or density greater than number 1 of the Ringlemann chart or 20% opacity except as allowed under s. NR	**(1)** The permittee shall use only coke and/or natural gas to fire the cupola. **[s. NR 407.09(4)(a)3.b., Wis. Adm. Code]** **(2)** The permittee shall use the baghouse/fabric	**(1)** Whenever any testing is required by the department for visible emissions, the owner or operator of the source shall use Method 9 in 40 CFR part 60, Appendix A, incorporated by reference in s. NR 484.04(13), Wis. Adm.

[5] The permittee identified the frequency of the internal inspections of the baghouse in the Malfunction Prevention and Abatement Plan.

B. Process P30, Control Device(s) C11 and C12, Stack S12 – Mineral Wool Cupola. Maximum Heat Input: 33.21 MMBtu/hr. Controlled By an Afterburner (C11) In Series With a Baghouse (C12). Constructed or Modified in 1969.

Pollutant	a. Limitations	b. Compliance Demonstration	c. Reference Test Methods, Record-keeping and Monitoring Requirements
1. Particulate Matter (PM/PM_{10})	**(1)** No person may cause, allow or permit the emission of particulate matter to the ambient air from any fuel burning installation in excess of 0.15 pounds per million Btu heat input. **[s. NR 415.06(2)(a), Wis. Adm. Code]** **(2)** The No. 1 tile dryer may emit up to, but not more than 1.25 lb/hr of particulate matter.[7] **[s. 285.65(3) and (7), Wis. Stats.; s. NR 404.04, Wis. Adm. Code]**	**(1)** The permittee shall use only natural gas, as defined in s. NR 400.02(104), Wis. Adm. Code, to fire the dryer.[8] **[s. NR 407.09(4)(a)3.b., Wis. Adm. Code]**	**(1)** Whenever any testing is required by the department for non-fugitive particulate emissions, including back-half, the owner or operator of the source shall use Method 5 in 40 CFR part 60, Appendix A, incorporated by reference in s. NR 484.04(13), Wis. Adm. Code, to determine non-fugitive particulate emissions, and Method 202 to determine condensible particulate emissions (back-half). **[ss. NR 407.09(1)(c)1.a. & (4)(a)1., NR 439.06(1) and NR 439.07(8)(b), Wis. Adm. Code]** **(2)** The permittee shall retain monthly records describing the fuels burned. **[ss. NR 407.09(1)(c)1.b. & (4)(a)1. and NR 439.04(1)(d), Wis. Adm. Code]**
2. Visible Emissions (VE)	**(1)** No owner or operator may cause or allow emissions of shade or density greater than number 1 of the Ringlemann chart or 20% opacity except as allowed under s. NR 431.05(1) and (2), Wis. Adm. Code. **[s. NR 431.05, Wis. Adm. Code]**	**(1)** The permittee shall use the requirement in I.C.1.b.(1), above, to demonstrate compliance with the limitation in I.C.2.a.(1). **[s. NR 407.09(4)(a)3.b., Wis. Adm. Code]**	**(1)** Whenever any testing is required by the department for visible emissions, the owner or operator of the source shall use Method 9 in 40 CFR part 60, Appendix A, incorporated by reference in s. NR 484.04(13), Wis. Adm. Code, to determine compliance with a visible emission limitation. **[ss. NR 407.09(1)(c)1.a. & (4)(a)1. and NR 439.06(9)(a)1., Wis.**

[7] The permittee elected this emission limit, which is more restrictive than emission limits in I.C.1.a.(1). The air quality impact analysis conducted on November 6, 2007 showed that this emission limit met the ambient air quality standards for particulate matter (PM and PM_{10}).

[8] Limiting the types of fuels used is an adequate method of demonstrating compliance with the particulate matter emission limit because the theoretical emissions while burning natural gas are less than the allowable limit (0.15 lb/MMBtu). The theoretical emissions are calculated using AP-42 emission factors. The usage of natural gas represents the worst case scenario (7.6 pounds per million cubic feet of natural gas, AP-42, 5th edition, chapter 1.3). Assuming a standard heating value for natural gas (1,000 Btu/ft^3, AP-42), the emission factor, when converted to pounds per million Btu of heat input, is less than the allowable limit [7.6 lb/$mmft^3$ ÷ (1,000 Btu/ft^3) x million ft^3/1,000,000 ft^3 x 1,000,000 Btu/million Btu) = 0.0076 lbs/MMBtu].

C. Process P32, Stack S13 – One 110 MMBtu/hr Acoustical Tile Dryer Fired with Natural Gas; Constructed Or Last Modified in 1998; Emissions are uncontrolled.

Pollutant	a. Limitations	b. Compliance Demonstration	c. Reference Test Methods, Record-keeping and Monitoring Requirements
			Adm. Code] **(2)** The permittee shall use the recordkeeping and monitoring requirements in I.C.1.c.(2), above, to monitor compliance with the limitation in I.C.2.a. **[ss. NR 407.09(1)(c)1.b. & (4)(a)1., Wis. Adm. Code]**
3. Nitrogen Oxides (NO_x)	**(1)** The No. 1 tile dryer may emit up to, but not more than 8,249 pounds of nitrogen oxide emissions per month, averaged over any 12 consecutive months. **[s. 285.65(3) and (7), Wis. Stats.; s. NR 404.04, Wis. Adm. Code]**	**(1)** The permittee shall use the requirement in I.C.1.b.(1), above, to demonstrate compliance with the limitation in I.C.3.a.(1). **[s. NR 407.09(4)(a)3.b., Wis. Adm. Code]** **(2)** Within 15 business days after each month, the permittee shall compute and record the following information for the No. 1 tile dryer: (a) The amount of natural gas used in the previous month, in millions of cubic feet. (b) The amount of NO_x emitted (in pounds) for the previous month using the following equation[9]: $E_{NOx} = 0.75 \times NG \times EF_{NG}$ Where E_{NOx} = total amount of NO_x emitted in pounds per month NG = amount of natural gas (in units of MMCF) used per month EF_{NG} = NO_x emission factor for natural gas combustion (c) The amount of NO_x emitted (in pounds per month) averaged over the last 12 consecutive months.	**(1)** Whenever any testing is required by the department for nitrogen compound emissions, the owner or operator of the source shall use Method 7, 7A, 7B, 7C, 7D or 7E in 40 CFR part 60, Appendix A, incorporated by reference in s. NR 484.04(13), Wis. Adm. Code, to determine compliance with a nitrogen compound emission limitation. **[ss. NR 407.09(1)(c)1.a. & (4)(a)1. and NR 439.06(6)(a), Wis. Adm. Pollutant	a. Limitations	b. Compliance Demonstration	c. Reference Test Methods, Record-keeping and Monitoring Requirements
1. NSPS for Stationary Spark Ignition Internal Combustion Engines (40 CFR part 60 subpart JJJJ)	(1) The permittee must comply with the following emission standards as listed in Table 1 in 40 CFR part 60 subpart JJJJ for the emergency stationary spark ignition internal combustion engines with a maximum engine power greater than 25 hp and less than 130 hp. (a) Emissions of nitrogen oxides (NO_x) and hydrocarbon (HC) combined may not exceed 10 g/hp-hr; and (b) Emissions of carbon monoxide (CO) may not exceed 387 g/hp-hr. **[s. 285.65(13), Wis. Stats. and 40 CFR §60.4233(d)]** (2) The permittee may not install emergency stationary spark ignition internal combustion engines that do not meet the applicable requirements in I.J.1.a.(1) after January 1, 2011. **[s. 285.65(13), Wis. Stats. and 40 CFR §60.4236(c)]** (3) The permittee shall comply with applicable General Provisions specified in Table 3 to Subpart JJJJ of part 60. **[s. 285.65(13), Wis. Stats., 40 CFR §60.4246, and Table 3 to Subpart JJJJ of Part 60]**	(1) The permittee must operate and maintain stationary spark ignition internal combustion engines that achieve the emission standards as required in I.J.1.a.(1) over the entire life of the engine. **[s. 285.65(13), Wis. Stats. and 40 CFR §60.4234]** (2) To demonstrate compliance with I.J.1.a.(1), the permittee shall comply with one of the methods specified in (a) and (b) below: (a) Purchasing an engine certified to the emission standards in I.J.1.a.(1) according to procedures specified in this subpart, for the same model year and demonstrating compliance according to the method specified in paragraph (a)(i) below. (i) If you operate and maintain the certified stationary SI internal combustion engine and control device according to the manufacturer's emission-related written instructions, you must keep records of conducted maintenance to demonstrate compliance, but no performance testing is required if you are an owner or operator. You must also meet the requirements as specified in 40 CFR part 1068, subparts A through D, as they apply to you. If you adjust engine settings according to and consistent with the manufacturer's instructions, your stationary SI internal combustion engine will not be considered out of compliance. (b) Purchasing a non-certified engine and	(1) If the permittee owns or operates an emergency stationary spark ignition internal combustion engine that is less than 130 hp, was built on or after July 1, 2008, and does not meet the standards applicable to non-emergency engines, the permitte must install a nonresettable hour meter upon startup of the emergency engine. **[s. 285.65(13), Wis. Stats. and 40 CFR §60.4237(c)]** (2) When conducting performance tests, the permittee shall comply with procedures in §60.4244. **[s. 285.65(13), Wis. Stats. and 40 CFR §60.4244]** (3) The permittee shall meet the following notification, reporting and recordkeeping requirements: (a) The permittee shall keep records of the following information: (i) All notifications submitted to comply with 40 CFR part 60 subpart JJJJ and all documentation supporting any notification. (ii) Maintenance conducted on the engine. (iii) If the stationary SI internal combustion engine is a certified engine, documentation from the manufacturer that the engine is certified to meet the emission standards and information as required in 40 CFR parts 90, 1048, 1054, and 1060, as applicable.

J. Process P11, Stack S30 - Emergency Water Pump, Powered by a Spark Ignition Natural Gas Internal Combustion Engine. Maximum heat input: 0.805 MMBtu/hr. 97.5 Brake Horsepower (bhp). 60 kW power output. Constructed Or Last Modified in November 2012. Emissions are uncontrolled.

	(4) The permittee may not cause, allow or permit emissions of hydrogen fluoride off the source property to exceed 246 micrograms per cubic meter in any one hour period.[21] **[ss. NR 445.07(1)(a), and NR 445.08(2)(b), Wis. Adm. Code]***		
	(5) LAER: The permittee shall control arsenic emissions from the mineral wool cupola using the baghouses.[22] **[s. 285.65(7), Wis. Stats. and ss. NR 445.07(1)(c), and NR 445.08(2)(f), Wis. Adm. Code]***		

[21] In the operation permit renewal application submitted in December 2012, the permittee indicated that the emission testing was conducted by the permittee for US EPA during the reconsideration of the NESHAP for the mineral wool manufacturing industry. In the email dated December 18, 2013, the permittee indicated that the correct emission factor for hydrogen fluoride from the cupola (Process P30) should be 0.10 lb/ton at the outlet of the baghouse. Accordingly, the hourly emission rate of hydrogen fluoride is 1.15 lb/hr, which exceeds the threshold level in column (e) of Table A in ch. NR 445, Wis. Adm. Code. The air quality impact analysis conducted on January 17, 2014, showed that this after control emission rate met the ambient air quality standards for hydrogen fluoride.

[22] In the operation permit renewal application submitted in December 2012, the permittee indicated that the emission testing was conducted by the permittee for US EPA during the reconsideration of the NESHAP for the mineral wool manufacturing industry. The test results showed the after control emissions of arsenic exceeded the threshold level in column (e) of Table A in ch. NR 445, Wis. Adm. Code. The permittee elected to comply with LAER to achieve compliance.

PART III
COMPLIANCE ASSURANCE MONITORING (CAM)

CONDITION TYPE	a. CONDITIONS
1. Compliance Assurance Monitoring (CAM) Requirements	(1) The permittee shall comply with the following provisions from the CAM plan[23] for the mineral wool cupola (Process P30) for carbon monoxide (CO) and carbonyl sulfide (COS) emissions: (a) The permittee shall monitor and record the temperature in the combustion zone of the thermal oxidizer on a continuous basis, with a minimum data recording of once every 15 minutes of operation during operation ofthe cupola. (b) The 1-hour average temperature in the combustion zone of the thermal oxidizer shall be maintained at a minimum temperature of 1,300 degree Fahrenheit during the operation of the cupola. (c) The permittee shall take corrective actions and record as an excursion whenever the 1-hour average temperature falls below 1,300 degree Fahrenheit. (d) The temperature monitoring device used to monitor temperature in the combustion chamber of the thermal oxidizer shall have an accuracy of 0.5 percent of the temperature being measured in degrees Fahrenheit or $\pm$ 5°F of the temperature being measured, or the equivalent in degrees Celsius (centigrade), whichever is greater. (e) The permittee shall inspect the temperature monitoring device monthly to ensure proper operation of the device. **[s. 285.65(13), Wis. Stats., 40 CFR 64.2, and 40 CFR 64.3]** (2) The permittee shall comply with the following provisions from the CAM plan for the mineral wool cupola (Process P30) for particulate matter, hydrogen chloride (HCl), and hydrogen fluoride (HF) emissions: (a) The permittee shall monitor and record the pressure drop across the pulse jet baghouse once for every 8 hours of process operation or once per day, whichever yields the greatest number of measurements. (b) The pressure drop across the baghouse shall be maintained between 0.5 and 10 inches of water column. (c) The permittee shall take corrective actions and record as an excursion whenever the pressure drop measured by the electronic system falls below 0.5 inches of water column or above 10 inches of water column. (d) The permittee shall perform periodic internal inspections and routine maintenance and repair to ensure proper operation of the jet pulse baghouse. **[s. 285.65(13), Wis. Stats., 40 CFR 64.2, and 40 CFR 64.3]** (3) The permittee shall comply with the following provisions from the CAM plan for Line No. 1 finishing and dimensioning (Process P33), Line No. 2 finishing and dimensioning (Process P37), and Line No. 1 mould cleaning brushes and vac-u-lift (Process P39), for particulate matter emissions: (a) The permittee shall monitor and record the pressure drop across the pulse jet baghouse once for every 8 hours of process operation or once per day, whichever yields the greatest number of measurements.

[23] The final CAM plan was submitted in February 2014.

CONDITION TYPE	a. CONDITIONS
	(b) The pressure drop across the baghouse shall be maintained between 0.5 and 10 inches of water column. (c) The pressure drop monitoring device shall be accurate to within 5% of the pressure drop being measured or within +/- 1 inch of water column, whichever is greater. (d) The permittee shall take corrective actions and record as an excursion whenever the pressure drop measured by the electronic system falls below 0.5 inches of water column or above 10 inches of water column. (e) The permittee shall perform periodic internal inspections and routine maintenance and repair to ensure proper operation of the jet pulse baghouse. **[s. 285.65(13), Wis. Stats., 40 CFR 64.2 and 40 CFR 64.3]** (4) The permittee shall develop and implement a written quality improvement plan (QIP) for any of the monitoring requirements under Conditions III.1.a.(1), (2), or (3) if the required monitoring in Conditions III.1.a.(1), (2), or (3) shows an accumulation of excursions of the indicator ranges established in the CAM plan in excess of 5% of the operating time during a semiannual monitoring period[24]. The QIP shall contain the elements listed in 40 CFR 64.8(b). **[ss. 285.65(7), 285.65(13), Wis. Stats. and 40 CFR 64.8(a)]** (5) The permittee shall report the following items in the semi-annual compliance monitoring report required by Condition I.ZZZ.3.a.(1) of this permit. (a) the number of excursions, duration of excursions, cause of excursions, and the corrective actions taken for each excursion; (b) the number, duration, and cause for monitor downtime incidents. **[s. 285.65(13), Wis. Stats. and 40 CFR 64.9]** Note: Implementation of a QIP shall not excuse the permittee from compliance with any existing emission limitation or standard, or any existing monitoring, testing, reporting or recordkeeping requirement that applies under federal, state, or local law, or any other applicable requirement of the Clean Air Act.

[24] The semiannual monitoring periods are January 1 to June 30 and July 1 to December 31 every year.
